Subject: Seeker RAM software for the CM-2
```

Barbara Lincoln informs me you are interested in the new Seeker RAM
Information Retrieval system we've build for the Connection Machine.

How would you like me to deliver it to you? The software is available as a
set of binary executables for a Sun4/CM-2 running SunOS 4.1 and CMSS 6.1.
The archive runs about 3 Megabytes (compressed). I can uuencode, split and
mail it to you, we can use FTP, or we could mail you a QIC-150 cartridge
tape. Whatever is easiest, let me know.

Cc: gbnewby@alexia.lis.uiuc.edu

Hi, Barbara. Thanks for the note on the new WAIS software
for the CM. As we've discussed, I am interested in running
on the CM-2 at NCSA, here at the U. of Illinois. Please
forward details on what's involved in using the software.

My phone is 217-244-7365, fax is 217-244-3302, and email
is, of course: gbnewby@alexia.lis.uiuc.edu

Thanks much.
